# six reasons to switch to SutureOut today

IT'S **FASTER**: Enables safe cutting of sutures from outside the suture loop, making suture removal much faster for the caregiver, increasing efficiency and patient throughput.

IT'S **EASIER**: Eliminates the need to get inside the suture, which is especially difficult with tightly-tied knots and embedded sutures, making suture removal much easier for the clinician.

IT'S **MORE HYGIENIC**: Lets the practitioner collect removed sutures right on the tool's integrated tacky surface, reducing cleanup time while supporting hygienic practices and better infection control protocols.

IT **INCREASES PATIENT COMFORT**: Dramatically reduces the amount of tension placed on the suture and is less intimidating than scissors and scalpels, making suture removal significantly more comfortable for the patient.

IT **CUTS DISPOSAL COSTS**: One SutureOut tool weighs less than 1 gram and is 95% lighter than scissors, providing a major savings on sharps disposal.

IT'S **ECO-FRIENDLY**: SutureOut is comprised of 95% recyclable, degradable material, supporting sustainability, clean-med, and medical waste reduction initiatives at your facility.
